

Uber Problems and Business Requirements

Power BI Analytics Dashboard Requirements

1. Overview Page

KPIs (Key Performance Indicators)

- Completed Bookings
- Lost Bookings
- Revenue
- Total Distance
- Average Distance

Filters & Time Analysis

- Add a filter for Vehicle Type.
- Monthly Analysis: Completed Bookings and Revenue.
- Quarterly Analysis: Completed Bookings and Revenue.

Additional Analysis

- Revenue by Vehicle Type.
- Top Drop and Pickup Locations based on Booking Count.
- Ratings: Average Rider Rating and Average Driver Rating.

2. Vehicle Page

Provide detailed information by Vehicle Type:

- Booking Count
- Revenue
- Revenue Contribution

3. Revenue Page

Analyze Revenue by:

- Customer
- Vehicle
- Payment Method
- Monthly and Quarterly trends

4. Rider Page

Rider and Cancellation Analysis

- Cancelled Rides by Reason
- Cancellation analysis by Payment Method
- Monthly and Quarterly analysis
- Detailed Rider Data in a Table
- First-Time Riders
- Returning Riders
- Regular Riders

5. Location Page

Location and Distance Analysis

- Monthly Total Distance
- Total Distance by Vehicle Type
- Busy Time Slots
- Busy Areas

6. Filters & User Experience

- Add a Hide/Show Filter Panel to maintain clean and safe spacing.
- Include multiple interactive filters throughout the report.
- Ensure filters provide an easy way to explore the dashboard without overcrowding the report.

Overall Requirement: Build an interactive Uber analytics dashboard covering bookings, revenue, vehicles, riders, locations, ratings, cancellations, time-based trends, and detailed filtering capabilities.
